|                | <p>A backdoor is a type of cybersecurity threat that allows attackers to secretly compromise a system and conduct malicious activities, such as stealing data and modifying files. Backdoors can be difficult to detect, as they often use legitimate system applications to evade defense mechanisms. Threat actors often utilize special malware, such as PlugX, to establish backdoors on target devices.</p> <p><b>Sliver</b></p> <p>Sliver is an open-source command-and-control (C2) framework that has been increasingly adopted by threat actors as an alternative to tools like Cobalt Strike. Developed by security firm Bishop Fox, Sliver was initially intended for legitimate security testing and red teaming exercises. However, its robust features and open-source nature have made it attractive to malicious actors seeking to control compromised systems.</p> |

Behavior graph

| Specs description                      |                                              |                                                  |                                        |
|----------------------------------------|----------------------------------------------|--------------------------------------------------|----------------------------------------|
| Program did not start                  | Low-level access to the HDD                  | Process was added to the startup                 | Debug information is available         |
| Probably Tor was used                  | Behavior similar to spam                     | Task has injected processes                      | Executable file was dropped            |
| Known threat                           | RAM overrun                                  | Network attacks were detected                    | Integrity level elevation              |
| Connects to the network                | CPU overrun                                  | Process starts the services                      | System was rebooted                    |
| Task contains several apps running     | Application downloaded the executable file   | Actions similar to stealing personal data        | Task has apps ended with an error      |
| File is detected by antivirus software | Inspected object has suspicious PE structure | Behavior similar to exploiting the vulnerability | Task contains an error or was rebooted |
| The process has the malware config     |                                              |                                                  |                                        |
